## Chain Link Terminal Cap

The Chain Link Fencing Terminal Caps are vital components for finishing commercial-grade fencing projects. These caps are most commonly found on the terminal posts of a commercial chain link perimeter, including corner posts and end posts. The primary function of this cap is to seal the top of the hollow fence post. By covering the opening, it prevents rain, snow, and environmental debris from entering the pipe, which is the leading cause of internal rust chain link fencing systems.
